

HydraFacial Keravive Treatment Post Care Tips

Lucky you!

You're on your way to the healthiest scalp and hair of your life.

What's next?

- Book your next appointment 30 days from your first visit to ensure optimizing the best results.
- Do NOT wash your hair for at least 4 hours, and preferably leave on overnight, so all those powerful peptides absorb at capacity.
- Use the Hydrafacial Keravive Peptide Take-Home Spray the day after your appointment. Spray 3-6 pumps (one at a time onto areas of concern) and massage into scalp manually or with a scalp massager.
- For best results and to allow proper absorption of the peptides, do not use a hair dryer within an hour of receiving the treatment or applying the Hydrafacial Keravive Peptide Take-Home Spray.
- Wait 2 weeks to chemically treat your hair.
- Wait 2 weeks to receive any PRP treatments.
- Avoid extreme or repetitive tension on the hair such as tight ponytails, headbands, etc.
- Your scalp and hair should dry quickly and absorb with no heavy residue for about 15-20 minutes after the treatment. At this time, you can resume use of styling products.
- After you complete your 3 visits, continue daily use of the Hydrafacial Keravive Peptide Take-Home Spray and book your next series between 3 to 6 months depending on desired results.
